Ken Roberts
Waterside Power

Re: Supply of Dyed Ultra Low Sulfur Kerosene

Dear Ken:

Sprague Energy Corp. (Sprague) has supplied Waterside Power with Dyed Ultra Low Sulfur Kerosene (ULSK) at their Stamford generating plant since it became operational. Sprague currently stores this product at 9 terminals in our system, totaling over 10,000,000 gallons of storage. We have the capability to deliver to Waterside Power from terminals located in Northern NJ, Bronx NY, East Hartford CT, and Albany NY.

The product supplied, ultra low sulfur kerosene, is not the product used to heat homes in the Northeast. No.2 fuel oil is used for that purpose. ULSK is used by Transit agencies and power plants, for the most part. Sprague has the ability to deliver to Waterside with our own trucks, those of a dedicated carrier, or multiple common carriers.

We forecast adequate supplies of this product for the foreseeable future.

Thank you for your business. If you have any questions please contact us.

Sincerely,

Burr J. Mosher III
Director
